## [New Features in this Release](#)

[Range tag/Serial Number Filters](#)

[Custom BOM Appearance](#)

## [Bug Fixes in this Release](#)

### New Features in this Release

#### Range tag/Serial Number Filters

Range tags - most commonly used for serial number filters - are now available as a refinement on the search page. Users are able to perform a search, and then filter results based on a range of tag values. If you are using tags that are type 'range', look for the new filter type on the left side of your search results page.

#### Custom BOM Appearance

When viewing the BOM, you can now change your view to a 'grid' view for quicker and easier scanning. This includes the ability to scroll to the side so you can see multiple columns of information. Users can also now drag the edge of the BOM to resize it, larger or smaller, depending on the information they would like to see. If the BOM is made smaller, the diagram is larger. And if the BOM is made larger, the diagram shrinks.

This gives users more control over the way they view diagrams and BOMs together.

### Bug Fixes in this Release

Feature	Description	Ideas Ref
BOM Hotpoint Scrolling	Clicking on a hotpoint doesn't always scroll to the part in the BOM. This functionality was not consistently working well, especially on IE and Firefox. This fix improves performance so that every time you click a callout in a diagram, the BOM will highlight and scroll to that item.	CLOUD-I-124

## Documoto 2017.3 Cloud Library Release Notes

Taxonomy Editor	The taxonomy editor in Tenant Admin was sometimes not opening - blocking you from building your taxonomy! We identified and fixed the issue, so you can click 'open editor' and get to your edit screen	CLOUD-I-116
Search Results	In HTML, the "Categories" refinement area is based on your existing media shelves. We noticed 'all' media shelves were displaying, when in fact only media shelves the current user has access to should display. This is now fixed so that only the appropriate media shelves will display to the current user.	N/A
