Up to now, you could find a user by opening the organization and doing a search. This would be problematic if you were not sure what organization the user is in and would lead to a frustrating search within each organization

Copy Access Controls from one organization to another

Applying access controls to a new organization just got easier. You now have the option to make a one-time copy of all access controls from one organization to another. This saves publishers time when they are creating a new organization and want to mimic the same access controls as a pre-existing organization.

Documoto 2017.6 Cloud Library Release Notes

To use this feature, log in to Organization Admin and select an organization from the new "Copy Access Controls From" selector.

The screenshot shows the 'General' settings page for an organization. On the left is a navigation menu with categories like 'Miscellaneous', 'Profile', 'Commerce', and 'Shopping Cart'. The 'General' section is active. The settings include:

- Name: [Text Input]
- Organization Key: [Text Input]
- Parent: [No Parent] with a 'Change...' button
- DMZ Expiration Period: Never
- Copy Access Controls From: [Dropdown Menu] x

This will take all media and the access controls applied to those media and replicate them for the organization you are currently editing.

CAUTION: If the organization you are editing already has media and access controls applied, this action will overwrite those access controls.

The copy only occurs one time, so any future modifications you make to access controls will need to be happen in each organization independently - but now you will not need to manually apply access for all of your media when you create a new organization.

Updated Features in this Release

Feature	Description	Ideas Ref
Page Viewer design update	<p>We are continuing to improve the page viewer to make it easier to find the information you need quickly. There are a number of changes that were made. Two key highlights related to the BOM:</p> <p>Toggling the BOM to a 'horizontal' view will now display the BOM as a table at the bottom of the diagram</p> <p>The 'tile' view will always be used when viewing the BOM in the 'vertical' mode, and the vertical space is now a fixed width</p>	CLOUD-I-15, CLOUD-I-208, CLOUD-I-210
Zoom to hotpoint	When a user clicks a hotpoint in the BOM, the application will now zoom to that hotpoint.	N/A
Support for external media	If a search result is a link to an item that is hosted external Documoto - for instance a link to a page on your website - a user can now click that item and be taken to that external link in a separate browser tab.	N/A
BOM Grid View can now be expanded to view nested parts	When a BOM row contains nested parts, you can expand the grid view to see the nested items	N/A

Recently viewed items on homepage	On the homepage, the last 12 items the user has viewed will now display - allowing for quick access to items that a user views often.	N/A
Contact Media Owner	You can now contact the media owner when you navigate via a book to a page, part, or document. This allows end users to submit errors or corrections directly to the publisher of the information.	CLOUD-I-217

Bug Fixes in this Release

Feature	Description	Ideas Ref
Media Identifier Label	In search results, the media identifier is now labeled so users know why they are seeing that information	CLOUD-I-39
Contact media owner bug fix	Fixed a bug to handle a blank subject line in the 'contact media owner' email	N/A
Quick Add not consistently finding parts	Fixed a bug with quick add where parts with a "-" in them were not consistently being returned	N/A
Hotpoint number centering	Hotpoint numbers on exploded diagrams are no longer off-center	N/A
