

Documoto 2017.8 Release Notes

June 29, 2017

Bug Fixes in this Release

Feature	Description
Supersede Part API	Users should no longer receive an I/O error when attempting to use the API.
Image Viewer in HTML Cloud Library	Users should no longer see an 'Error Loading Image' message when viewing Image type media.
Printing	Documoto will now print the correct translation of any tag values displayed on the printed book, chapter, or page. Documoto was not always printing the correct translation for all tag values before this fix.
Order Management	The correct email addresses configured for the Organization will now be honored when an Order is emailed. Documoto was emailing the order to all email addresses configured for both the Organization and Tenant Level before this fix.
General HTML Cloud Library	<p>Documoto will now display the application header bar even when the application is embedded within an iFrame.</p> <p>Taxon image size has been increased so that user can see a larger image on all browse tiles on the Cloud Library homepage.</p>
Contact Media Owner in HTML Cloud Library	<p>Documoto will now include the Part Name in the email subject when contacting a media owner while viewing a part.</p> <p>All contact media owner outbound email issues have been fixed in this release as well</p>
Publisher	Documoto will no longer display previously deleted Media in the Publisher Media Manager.
