

Release Date

The Documoto 2016.5 Release will be available in June 2016.

What's New

This release delivers ongoing improvements to our core Documoto platform and further enhancements to order management. A new feature - the ability to 'bulk insert' a page to edit your media's table of contents is now available. We also delivered a number of defect fixes and enhancements, listed below.

Highlights

- ✓ **Defect fixes.** The full list of defect fixes for 2016.5 is at the end of these release notes. Some key highlights include:
 - ✓ Searching on serial number tags was not working
 - ✓ Improved job manager query performance
 - ✓ Compound word searches weren't working in PDFs
 - ✓ Camel Case tag values weren't searchable in library
 - ✓ Ability to enter 'no price' for a part
 - ✓ Send an RFQ with an empty parts list
 - ✓ Reporting IP address for Documobile users

- ✓ **Order Management improvements.** Continuing our iterative for order management, we added:
 - ✓ Auto-populated order forms based on user, org, and tenant tags
 - ✓ Org email addresses no longer being inherited by the tenant
 - ✓ Storefront Automation API upgrades

CFE Defect Fixes and Enhancements

Type	Summary	Comments
Defect	Unable to Publish in Docustudio 16.1. ToBePublished and Export folders are not valid.	Fixed publishing bug in Docustudio 16.1 where some directories were not being recognized
Defect	Search on Serial Number Tag Not Performant	Correct search results come back when searching for media with a Serial Number Tag
Defect	Catalog results are not accurate when superseding a part with spaces in the name	Can now supersede parts with a space in their name
Enhancement	Scheduler - UpdateIndexJob sends messages to AAMQ	System improvement that makes indexing more efficient
Enhancement	Run Image Optimizer inline during publishing	Improves publishing speeds

Last Updated: June 16, 2016

Defect	Some ListBox Values when filtered on, incorrectly produce zero search results	Searching on listbox values that include hyphens now returns the correct results
Enhancement	Improve JobManager Query Performance	System improvement that reduces the load of job manager - improves overall processing speed and performance of Documoto
Defect	Publisher Search on Range Tag returns too many results	Corrected to return the correct results for range tag queries
Defect	Searches on part tags are not highlighting results in parts pages	Part tags now highlighted in parts page
Defect	Characters displayed incorrectly in pdf	Special characters now display correctly in PDFs
Defect	Reporting IP Address for Documobile Users	IP address now added to user reports for Documobile users
Defect	Client-side getPartInfo integration with AssetWorks is not working	getPartInfo integration with AssetWorks is now functioning correctly
Defect	Publishing Web Service API Update Media with Tag Range Support Error	
Enhancement	Cancel Scheduler Ping Jobs on arrival	Internal system improvement for stability
Enhancement	Allow 'Submit RFQ' to activate RFQ form, even if no parts in cart	The cart no longer required parts in it in order to click the Submit RFQ button
Defect	Unable to Upload/Publishing of PLZ in Docustudio. System Performance extremely lagging.	Docustudio system performance improved through optimizations
Defect	Compound word searching does not work in pdf's	
Defect	Camel Case tags values are not searchable in some instances of the library	
Enhancement	Ability to enter "No Price" for a Part	Can now leave price field blank and have "N/A" appear, instead of "0.00"
Defect	exportMedia API Improvements	Improved logging on the API to further troubleshoot
Defect	Supersede Part with Null Value	If a part makes it into the system with a NULL or blank value, it is properly superseded
Defect	Importing an .mdz loses any image file except for the first diagram	All image files are now included in the .mdz

Last Updated: June 16, 2016

Defect	Need to check for negative call outs when parsing an svg coming into DM.	When an svg has callouts outside of the viewable area, a message will be displayed. Callouts should all fit within the viewable grid
Defect	Dynamic TOC Naming is showing the 'tag', if set up to show that tag, as many times as the page exists within the book.	
Defect	Regression: Uploading PLZ file causes exception translation error.	
Defect	New DWS methods return error messages with \$1 still in them	
Enhancement	Move Async Indexing to IndexService	Improves indexing performance
